INTERNATIONAL SEARCH REPORT

International application No. PCT/AU2004/001130

Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)								
This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:								
1. Claims Nos.:								
because they relate to subject matter not required to be searched by this Authority, namely:								
2. Claims Nos.:								
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:								
3. Claims Nos.:								
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a)								
Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)								
This International Searching Authority found multiple inventions in this international application, as follows: The international application does not comply with the requirements of unity of invention because it does not relate to one invention or to a group of inventions so linked as to form a single general inventive concept. In coming to this conclusion the International Searching Authority has found that there are different inventions as follows:								
(i) Claims 1, 14, 32 and their appended claims relate to a method/apparatus for collecting water from the ambient air. It is considered that "passing a gas into an enclosed space containing a mixture of the gas and a refrigerant vapour evaporated from a liquid refrigerant such that heat is drawn from condensation surface into the refrigerant so that water is condensed from the ambient air contacting the condensation surface" comprises a first "special technical feature".								
(ii) Claims 35, 38, 39 and their appended claims relate to a method/apparatus of separating a gas from a gaseous refrigerant mixture. It is considered that "mixing a liquid absorbent with gaseous mixture facilitating contact of the gaseous mixture with liquid absorbent" comprises a second special technical feature.								
(iii) Claim 40 and its appended claim relate to a method of providing heating. It is considered that "condensing a liquid refrigerant from a gaseous mixture and drawing heat from the condenser to provide the heat" comprises a third special technical feature.								
(iv) Claim 42 and its appended claims relate to a method of providing cooling. It is considered that "contacting a cooled cooling surface with ambient air and using the ambient air to provide the cooling" comprises a fourth special technical feature.								
(v) Claim 45 relates to a solar heating device. It is considered that "a pair of spaced apart reservoirs containing a refrigerant for pivoting a reflector for reflecting the solar heat on to an object to be heated" comprises a fifth special technical feature.								
1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.								
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.								
As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:								
4. X No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1 - 34								
Remark on Protest								
No protest accompanied the payment of additional search fees.

Information on patent family members

International application No. PCT/AU2004/001130

This Annex lists the known "A" publication level patent family members relating to the patent documents cited in the above-mentioned international search report. The Australian Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
